

Chat & reactions while collaborating

Cursor chat & reactions

Collaboration just got a lot more alive. You can now talk and react right from your cursor while working together in workflows and canvas — no need to jump to another app to say what you mean.

Cursor chat. Press / (or use the right-click menu) to fire off a quick message straight from your cursor. Everyone on the board sees it next to you in real time, and it fades away after a few seconds — perfect for a fast "can you move this node up?" without breaking your flow.

Cursor reactions. Right-click to drop an emoji reaction from your cursor. Your teammates see it instantly, so you can react in the moment while you work side by side.

Lightweight, expressive, and gone in a blink — the way live collaboration should feel.

We hope you will enjoy it! 🧡
